

# The Lumber Buddy™ Portable Workstation can be customized to fit your special needs!

The Lumber Buddy™ Portable Workstation is now available in 8', 10', 12' and 14' units. Although our standard 8' unit will accommodate most needs, we have found instances where your needs may require larger units for special applications.

Whether you are running an oversized carriage on your forklift or using a fork truck that is too wide for our 8' unit (80" wheel base opening), Lumber Buddy, Inc. can build a unit to fit your unique situation.

## Adjustable Uprights

Adjustable uprights can be attached to either the front or back of your Lumber Buddy™ Portable Workstation, creating either a U-shaped stacking area or allowing you to backslide products shorter than eight feet.

## Platform Extensions

Adjustable platform extensions extend the platform width up to five feet and are ideal for working with Canadian width bundles. The added platform width is also very helpful when dealing with I-joists and wide sidings. These extensions are removable or will self-store on the unit.

## Leg Extensions

Attach these extensions to the front feet of your Lumber Buddy™ Portable Workstation and cause the entire platform to tilt back making it easier and safer to stack I-joists vertically.

Lumber Buddy™ also provides a variety of attachments to make your portable workstation even more useful.

Put a Lumber Buddy™ to work for YOU!
